SPECIMEN - NOT AN ISSUED WARRANTY

FLORIDA

MATERIAL ONLY

This document is a specimen. It sets out the material coverage available on ERS Metals standing seam panels so that a contractor or a building owner can review it before a profile, substrate and finish are specified.

It is not an issued warranty and it grants no coverage. It names no project, no purchaser and no covered material, and it carries no warranty number. The warranty for a given job is a separate written document, issued by the coil producer against that job and furnished through ERS Metals. Where this specimen and the issued warranty differ, the issued warranty governs.

ERS Metals is the distributor of the material described below. The limited material warranty is the coil producer's and is issued on the producer's terms. This specimen is a summary prepared by ERS Metals for review purposes only.

1. COVERAGE AVAILABLE

The term depends on the substrate and the coating, not on the panel profile. A snaplock, nailstrip or mechanical lock panel roll formed from the same coil carries the same term. Coverage runs from the date of sale shown on the ERS Metals invoice.

SUBSTRATE AND COATING	LIMITED WARRANTY TERM
AZ55 acrylic-coated Galvalume steel, mill finish	20 years
Galvalume steel and aluminum coated with Sherwin-Williams Kynar 500	35 years
Galvalume steel coated with Sherwin-Williams WeatherXL SMP	40 years

These are the coil producer's published limited warranty periods as of August 2, 2026. Confirm the term in force at the time of order. Kynar 500 is a registered trademark of Arkema. WeatherXL is a registered trademark of the Sherwin-Williams Company.

2. MATERIAL THIS SPECIMEN APPLIES TO

SUBSTRATE	GAUGE OR THICKNESS	COATING
Grade 50 Galvalume steel	26 ga and 24 ga	AZ55 acrylic, mill finish
Grade 50 Galvalume steel	26 ga and 24 ga	Kynar 500 PVDF
Grade 50 Galvalume steel	26 ga	Sherwin-Williams WeatherXL SMP
3000 series aluminum	0.032 in and 0.040 in	Kynar 500 PVDF

Availability varies by profile and color. Confirm the substrate, gauge and coating on the ERS Metals order acknowledgment before installation; coverage follows what was actually supplied and registered, not what was requested.

3. HOW COVERAGE IS ISSUED

1. ERS Metals registers the order with the coil producer at the time the order is entered. There is no charge for registration.
2. Registration records the substrate, gauge, width, coating and color supplied, the Florida Product Approval the panel is installed under, and the project information.
3. The coil producer issues the written warranty against that registration. Keep it with the project record and pass it to the building owner at closeout.
4. Coverage may be voided if the registered information cannot be verified, or if the material is used other than as registered.

Retain the invoice and the coil lot or mill tag numbers from the delivery paperwork. Traceability back to the coil is what supports a claim; without it a claim can fail on proof alone.

4. PROJECT RECORD CARRIED BY THE ISSUED WARRANTY

The fields below are blank on this specimen by design. On an issued warranty they identify the material actually covered.

PURCHASER

WARRANTY NUMBER

PROJECT ADDRESS

DATE OF SALE

SUBSTRATE, GAUGE AND COATING

COLOR

PROFILE AND FLORIDA PRODUCT APPROVAL

COIL LOT / MILL TAG NUMBERS

This is a specimen. It names no project, no purchaser and no covered material, and it grants no coverage. The written warranty issued for a project governs.

Material coverage is separate from installation workmanship. See the ERS Installations limited lifetime workmanship warranty.

5. EXCLUSIONS

Oil canning is not a defect. It is an aesthetic characteristic common to light gauge metal, it is outside the coil producer's control, and it is not grounds for rejection of material or for a warranty claim.

This is the coil producer's published position and it should be set out to the building owner before the roof is ordered, not after it is installed.

CONFIRM BEFORE THIS SPECIMEN IS ISSUED

The full schedule of exclusions in the issued warranty has not been reproduced here. ERS Metals has the coil producer's published oil canning exclusion above, but has not obtained the producer's complete written exclusion schedule. Request and insert it before this specimen is shown outside the company. Categories that must be resolved one way or the other:

- The coastal restriction. The coating manufacturer's own standard warranty forms for both WeatherXL and PVDF withhold all paint coverage on property within 1,500 feet of salt water or subject to sea spray. If the coil producer's form carries the same clause it removes finish coverage from a large part of coastal Florida, so settle this before coverage is quoted on any coastal job.
- Minimum roof slope, and outdoor storage of material in a way that retains water
- Fresh water rinsing and maintenance obligations, and the records the owner must keep
- Contact with or runoff from dissimilar metals, treated or wet lumber, and corrosive materials
- Damage during shipment, forming, handling and installation, including fastener selection
- Specialty, custom and metallic colors, and any shorter color change term that applies to them

6. COATING PERFORMANCE MEASURES

An issued paint warranty states what the coating is warranted to do and the test method for each measure. The coil producer does not publish those figures alongside the terms in section 1.

MEASURE	LIMIT	TEST METHOD
Film integrity: chip, crack, peel, flake, check	to be confirmed	to be confirmed
Chalk	to be confirmed	ASTM D4214, to be confirmed
Color change / fade	to be confirmed	ASTM D2244, to be confirmed
Substrate: rupture, structural failure, perforation	to be confirmed	to be confirmed

CONFIRM BEFORE THIS SPECIMEN IS ISSUED

Do not quote a chalk rating, a Delta E fade figure or a separate substrate perforation term to a customer until the coil producer has confirmed it in writing. Figures circulating for these coatings differ between issuers, and the roofing and sidewall limits are not the same. Until they are confirmed, quote only the overall limited warranty terms in section 1, which are sourced.

7. REMEDY, TRANSFER AND CLAIMS

Start a claim by contacting ERS Metals with the project address, the ERS Metals invoice number, and the coil lot or mill tag numbers from the delivery. ERS Metals holds the order record and can identify the coil that was supplied and the registration it was covered under.

CONFIRM BEFORE THIS SPECIMEN IS ISSUED

The remedy and the mechanics of a claim are the coil producer's to state and have not been confirmed. Resolve each of these before this specimen is issued:

- The exclusive remedy: repair, replacement coil or sheet, or refund of the original material cost
- Whether removal, refabrication and reinstallation labor is covered, and whether it is capped
- Whether the warranty is transferable on sale of the building, and on what conditions
- The notice period for reporting a defect, and the deadline for submitting a completed claim
- The aggregate liability cap, and the exclusion of incidental and consequential damages
- Governing law and venue

8. WHAT NO MATERIAL WARRANTY COVERS

A material warranty covers the coil and its coating. It does not cover the installation. Workmanship, flashing details, fastener pattern, underlayment and deck are the installer's responsibility, and are covered, if at all, by a separate workmanship warranty. ERS Installations issues a limited lifetime workmanship warranty on installations it performs; it is a separate document.

THIS SPECIMEN IS PROVIDED FOR REVIEW ONLY. IT CREATES NO WARRANTY, EXPRESS OR IMPLIED, AND NO OBLIGATION ON THE PART OF ERS METALS. THE WRITTEN LIMITED MATERIAL WARRANTY ISSUED BY THE COIL PRODUCER FOR A SPECIFIC PROJECT IS THE ONLY DOCUMENT THAT CREATES COVERAGE.
